

# RF TEST REPORT

**Application No.** : LH-230702312134

**Applicant** : Shenzhen Cheyang Technology Co., Ltd.

**Equipment Under Test (EUT)**

**EUT Name** : Car radio

**Model No.** : Z0625

**Serial No.** : See page 4

**Brand Name** : N/A

**Receipt Date** : 2023-07-21

**Test Date** : 2023-07-21 to 2023-08-02

**Issue Date** : 2023-08-02

**Standards** : ETSI EN 300 328 V2.2.2

**Conclusions** : **PASS**

In the configuration tested, the EUT complied with the standards specified above. The EUT technically complies with the RED Directive of 2014/53/EU requirements.

**Test/Witness Engineer** : *York xin*

**Approved & Authorized** : *Jack su*

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in the report.

| <b>Address</b>      | : | 369 Bulong Road, Ma'antang Community, Bantian Street, Longgang District, Shenzhen |

## 1.2 General Description of EUT (Equipment Under Test)

|                        |   |   |  |
|------------------------|---|---|--|
| EUT Name               | : | Car radio   |  |
| Model No.              | : | Z0625   |  |
| Serial No.             | : | Z0625C1, Q3366, Q3371, Q3161, Q3221KT, A2618KT, Q3461, A2769, Q3336, Q3203, K0129, A2516KT, Q3162KT, A2308KT, Q3217KT, AP01 Q3150, A2628KT, K0126, A2818, A2065, A2718, N3000KT, N2052, A2749, A2420F3, A2422F3, A2424F3, A2426F3, A2428F3, CY-1001, A3018, N2042, A3012, A3019, A3013, A3107, A2319, A2798, A3061, A2795, A2181, A2222, Q3570, A2905, A2799, Q3516, M1520, A2742, A3040, A3041, A3011, A2797, A2748, A3032, Q3300, A2772, A3017, A3091, A3056, A3195, Q3508, Z2085, A3215, A3080, A2666, A2915, A2743, A3039, A2796, A3049, A2773, A2893, Q3184, A2207, A3196, A3194, A2761, A3037, A2071, A2747, A2950, A2184, A3067, A3021, A3048, A2787, A3197, A2794, A2762, A3054, A2638, A3216, A3079, A3066, A3047, A3100, A2112, W5087, Q3306, A2900, A3082, A3038, A2882, A3084, A2740, A2806, Q3196, A3110, Q3521, A3065 |  |
| Model Difference       | : | The different models are identical in schematic and critical component, the only different is the appearance.   |  |
| Product Description    | : | Operation Frequency:  | 2402MHz~2480MHz  |
|                        |   | Number of Channel:  | 79 Channels see note（2）                                |
|                        |   | Out Power   | 3.72 dBm 1Mbps<br>2.49 dBm 3Mbps                       |
|                        |   | Antenna Designation:  | 0 dbi see note（3）                                      |
|                        |   | Modulation Type:  | GFSK 1Mbps(1Mbps)<br>π/4-DQPSK(2Mbps)<br>8-DPSK(3Mbps) |
|                        |   | Date Rate:  | 1~3 Mbps   |
| Power Supply           | : | DC 12V, 1A  |  |
| Connecting I/O Port(S) | : | Please refer to the User's Manual   |  |

**Note:**

(1) For a more detailed features description, please refer to the manufacturer's specifications or the User's Manual.

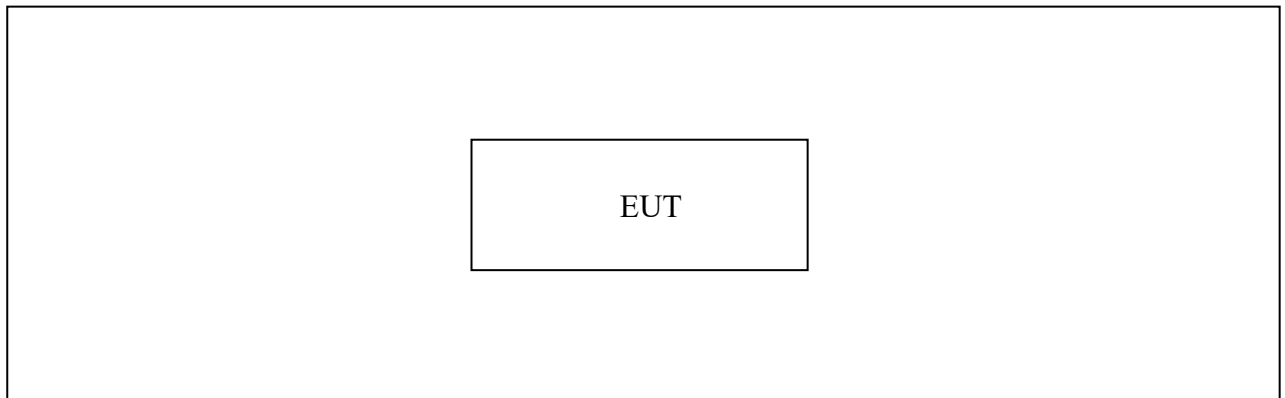

(2) Channel List:

| Channel | Frequency (MHz) | Channel | Frequency (MHz) | Channel | Frequency (MHz) |
|---------|-----------------|---------|-----------------|---------|-----------------|
| 00      | 2402            | 27      | 2429            | 54      | 2456            |
| 01      | 2403            | 28      | 2430            | 55      | 2457            |
| 02      | 2404            | 29      | 2431            | 56      | 2458            |
| 03      | 2405            | 30      | 2432            | 57      | 2459            |
| 04      | 2406            | 31      | 2433            | 58      | 2460            |

| 23      | 2425            | 50      | 2452            | 77      | 2479            |
| 24      | 2426            | 51      | 2453            | 78      | 2480            |
| 25      | 2427            | 52      | 2454            |         |                 |
| 26      | 2428            | 53      | 2455            |         |                 |

### (3) Antenna description

| Ant. | Brand | Model Name | Antenna Type | Gain(dBi) |
|------|-------|------------|--------------|-----------|
| 1    | N/A   | N/A        | Printed Ant  | 0         |

## 1.3 Block Diagram Showing the Configuration of System Tested

## 1.4 Description of Support Units

The EUT has been tested as an independent unit.

| Name | Model | S/N | Manufacturer | Used “√” |
|------|-------|-----|--------------|----------|
|      |       |     |              |          |

## 1.5 Description of Operating Mode

To investigate the maximum EMI emission characteristics generated from EUT, the test system was pre-scanning tested based on the consideration of following EUT operation mode or test configuration mode which possible have effect on EMI emission level. Each of these EUT operation mode(s) or test configuration mode(s) mentioned above was evaluated respectively.

| METAL SPEAKR WITH BLUETOOTH AND HANDSFREE |               |
|---|---------------|
| Lowest Channel                            | CH00: 2402MHz |
| Middle Channel                            | CH39: 2441MHz |
| Highest Channel                           | CH78: 2480MHz |

| Test Mode | Description                      |
|-----------|----------------------------------|
| Mode 1    | Transmit mode(2402/2441/2480MHz) |
| Mode 2    | Receive mode(2402/2441/2480MHz)  |

## 1.6 Description of Test Software Setting

During testing channel& Power controlling software provided by the customer was used to control operating channel as well as the output power level. The RF output power selection is for setting of RF output power expected by the customer and is going to be fixed on the firmware of the final end product power parameters of Bluetooth mode.

## 1.7 Test Facility

The testing report were performed by the Shenzhen LH Testing Technology Co., Ltd., in their facilities located at 106 and 107, building B15, Yintian Industrial Zone, Yantian community, Xixiang street, Bao'an District, Shenzhen

## 2 TEST RESULTS SUMMARY

| ETSI EN 300 328 V2.2.2 |   |                          |                            |                                      |                    |                         |                  |

Note:

- (1) "U/C": indicates whether the requirement is to be unconditionally applicable (U) or is conditional upon the manufacturers claimed functionality of the equipment (C).  
"E/O": indicates whether the test specification forms part of the Essential Radio Test Suite (E) or whether it is one of the Other Test Suite (O).  
"X": indicates there is no test specified corresponding to the requirement.  
"N/A": indicates test is not applicable in this Test Report.
- (2) The equipment must be complied with as a necessary condition for presumption of conformity, although conformance with the requirement may be claimed by an equivalent test or by manufacturer's assertion supported by appropriate entries in the technical construction file.
- (3) This requirement does not apply for equipment with a maximum declared RF Output power level of less than 10 dBm e.i.r.p. for equipment when operating in a mode where the RF Output power is less than 10 dBm e.i.r.p.
- (4) The equipment was supplied by Host system, so the upper extreme test voltage shall be 1.1 times the nominal voltage of the battery, and the lower extreme test voltage shall be 0.9 times the nominal voltage of the Host system.

### 3 Maximum Transmit Power

#### 3.1 Test Standard and Limit

##### 3.1.1 Test Standard

ETSI EN 300 328 V2.2.2 clause 4.3.1.1

##### 3.1.2 Test Limit

| Test Item                           | Limit  |
|-------------------------------------|--------|
| Equivalent isotropic radiated power | 20 dBm |

#### 3.2 Test Setup

Normal Condition

Extreme Condition

### 3.3 Test Procedure

1. The EUT was placed on the top of the turntable in chamber.
2. The test shall be made in the transmitting mode. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
3. This measurement shall be repeated with the transmitter in standby mode where applicable.
4. The receiver shall be set the center frequency equal to the EUT transmit, and the Resolution Bandwidth equal to the Video Bandwidth is set to 1 MHz for the frequency below 1 GHz, and the frequency is above 1 GHz the Resolution Bandwidth equal to the Video Bandwidth is set to 3MHz.
5. The broadband receiving antenna was fixed on the same height with the EUT to find each suspected emissions of both horizontal and vertical polarization. Each recorded suspected value is indicated as Read Level (Raw).
6. Replace the EUT by standard antenna and feed the RF port by signal generator.
7. The  $EIRP = A + G + 10 \cdot \log(1/x)$ , the A is the power measured in the above, and G is the gain of the antenna of the EUT in dBi and x is the duty cycle of the EUT in continuously transmitting mode.
8. The measurement shall be repeated at the lowest, the middle, and the highest channel of the stated frequency range. These measurements shall also be performed at the normal and the extreme test conditions.

### 3.4 Test Equipment Used

| Description              | Manufacturer   | Model No. | Serial No. | Last Cal.     | Cal. Interval |

## 4 Duty Cycle, Tx-Sequence, Tx-gap

### 4.1 Test Standard and Limit

#### 4.1.1 Test Standard

ETSI EN 300 328 V2.2.2 clause 4.3.1.2

#### 4.1.2 Test Limit

| Test Item      | Limit  |
|----------------|--|
| FHSS equipment | The maximum Tx-sequence time shall be 5 ms while the minimum Tx-gap time shall be 5 ms.<br>For non-adaptive FHSS equipment:<br>Duty Cycle shall be equal to or less than the maximum value declared by the supplier. |

The frequency range of the equipment is determined by the lowest and highest frequencies occupied by the spectrum envelope.

fH is the highest frequency of the spectrum envelope: it is the frequency furthest above the frequency of maximum power where the e.i.r.p. spectral density drops below the level of -80 dBm/Hz (-30 dBm if measured in a 100 kHz bandwidth).

fL is the lowest frequency of the spectrum envelope; it is the frequency furthest below the frequency of maximum power where the e.i.r.p. spectral density drops below the level of -80 dBm/Hz (or -30 dBm if measured in a 100 kHz bandwidth).

For a given operating frequency, the width of the spectrum envelope is (fH - fL). In equipment that allows adjustment or selection of different operating frequencies, the power envelope takes up different positions in the allocated band. The frequency range is determined by the lowest value of fL and the highest value of fH resulting from the adjustment of the equipment to the lowest and highest operating frequencies.

### 4.2 Test Setup

These requirements do not apply for equipment with a maximum declared RF Output power of less than 10 dBm e.i.r.p or for equipment when operating in a mode where the RF Output power is less than 10 dBm e.i.r.p.

Note:

The Equipment e.i.r.p. power is less than 10 dBm, so no requirement for this test item.

## 5 Dwell Time, Minimum Frequency Occupation and Hopping Sequence

### 5.1 Test Standard and Limit

#### 5.1.1 Test Standard

ETSI EN 300 328 V2.2.2 clause 4.3.1.3

#### 5.1.2 Limits

| Test Item                         | Frequency Range (MHz) | Limit   | Result |
|-----------------------------------|-----------------------|---|--------|
| Dwell Time                        | 2400-2483.5           | 0.4s  | PASS   |
| Minimum Frequency Occupation Time |                       | Not exceeding four times of the dwell time per hop and the number of hopping frequencies in use | PASS   |
| Hopping Sequence                  |                       | At least 15 hopping frequencies at all times  | PASS   |

### 5.2 Test Setup

### 5.3 Test Procedure

1. The transmitter output was connected to the spectrum analyzer.
2. Set Resolution Bandwidth of the spectrum analyzer to 1MHz and Video Bandwidth to 1MHz.
3. Use a video trigger with the trigger level set to enable triggering only on full pulses.
4. Sweep Time is more than once pulse time.
5. Set the center frequency on any frequency would be measured and set the frequency span to zero span.
6. Measure the maximum time duration of one single pulse.
7. Set the EUT for DH5, DH3 and DH1 packet transmitting.
8. Measure the maximum time duration of one single pulse.
9. DH5 Packet permit maximum  $1600/79/6=3.37$  hops per second in each channel (5 time slots RX, 1 time slot TX). So, the dwell time is the time duration of the pulse times 3.37 \*

31.6=106.6 with 31.6 seconds.

DH3 Packet permit maximum  $1600/79/4=5.06$  hops per second in each channel (3 time slots RX, 1 time slot TX). So, the dwell time is the time duration of the pulse times  $5.06 \times$

31.6=160 with 31.6 seconds.

DH1= Packet permit maximum  $1600/79/2=10.12$  hops per second in each channel (1 time slot RX, 1 time slot TX). So, the dwell time is

the time duration of the pulse times  $10.12 \times 31.6=320$  within 31.6 seconds.

10. The lowest, middle and highest frequency of the EUT should be tested.

#### 5.4 Test Equipment Used

| Description       | Manufacturer  | Model No. | Serial No. | Last Cal.     | Cal. Interval |
|-------------------|---------------|-----------|------------|---------------|---------------|
| Spectrum Analyzer | ROHDE&SCHWARZ | FSEA20    | DE25181    | Dec. 29, 2022 | 1 Year        |
| EMI Test Receiver | ROHDE&SCHWARZ | ESCI      | 101165     | Dec. 29, 2022 | 1 Year        |
| DC Power Supply   | GVE           | PL0825    | N/A        | Dec. 29, 2022 | 1 Year        |
| AC Power Supply   | Heng Jie      | HPC-1110  | 201007     | Dec. 29, 2022 | 1 Year        |

## 6 Hopping Frequency Separation

### 6.1 Test Standard and Limit

#### 6.1.1 Test Standard

ETSI EN 300 328 V2.2.2 clause 4.3.1.4

#### 6.1.2 Limits

| Test Item                                | Frequency Range (MHz) | Limit  | Result |
|--|-----------------------|--|--------|
| Hopping Channel Separation(Non-adaptive) | 2400-2483.5           | Occupied Channel Bandwidth or 100 kHz which is greater | PASS   |
| Hopping Channel Separation(Adaptive)     |                       | 100 kHz  | PASS   |

### 6.2 Test Setup

### 6.3 Test Procedure

1. The transmitter output was connected to the spectrum analyzer.
2. Set the spectrum analyzer as follows to measure the 20 dB bandwidth.  
Resolution BW : 30 kHz  
Resolution BW :100 kHz  
Detector : Peak  
Trace Mode : Max Hold.  
Sweep time : Auto.  
Span : Wide enough to capture the channel separation
3. Set the spectrum analyzer as follows to measure the 20 dB bandwidth.  
Resolution BW : 30 kHz  
Resolution BW :100 kHz  
Detector : Peak  
Trace Mode : Max Hold  
Sweep time : Auto  
Span : Wide enough to capture the channel separation

#### 6.4 Test Equipment Used

| Description       | Manufacturer   | Model No. | Serial No. | Last Cal.     | Cal. Interval |
|-------------------|----------------|-----------|------------|---------------|---------------|
| Spectrum Analyzer | ROHDE& SCHWARZ | FSEA20    | DE25181    | Dec. 29, 2022 | 1 Year        |
| EMI Test Receiver | ROHDE& SCHWARZ | ESCI      | 101165     | Dec. 29, 2022 | 1 Year        |

### 2402 MHz Channel Separation

### 2441 MHz Channel Separation

### 2480 MHz Channel Separation

## 7 Occupied Channel Bandwidth

### 7.1 Test Standard and Limit

#### 7.1.1 Test Standard

ETSI EN 300 328 V2.2.2 clause 4.3.1.7

#### 7.1.2 Limits

| Test Item          | Frequency Range (MHz) | Limit   | Result |
|--------------------|-----------------------|---|--------|
| Occupied Bandwidth | 2400-2483.5           | Fall completely within the Operation Band   | PASS   |
|                    |                       | For non-adaptive Frequency Hopping equipment with e.i.r.p greater than 10 dBm, the occupied Bandwidth shall equal to or less than the value declared by the supplier, and shall not greater than 5 MHz. |        |

### 7.2 Test Setup

### 7.3 Test Procedure

1. The transmitter output was connected to the spectrum analyzer.
2. Set the spectrum analyzer as follows to measure the 20 dB bandwidth.
  - Resolution BW : 30kHz.
  - Resolution BW : 100kHz.
  - Detector : Peak.
  - Trace Mode : Max Hold.
  - Sweep time : Auto.
  - Span : Wide enough to capture the channel separation.
3. Set the spectrum analyzer as follows to measure the 20 dB bandwidth.
  - Resolution BW : 30kHz.
  - Resolution BW : 100kHz.
  - Detector : Peak.
  - Trace Mode : Max Hold.
  - Sweep time : Auto.
  - Span : 3MHz

### 2402 MHz Bandwidth

## 2441 MHz Bandwidth

## 2480 MHz Bandwidth

## 8 Medium Utilisation (MU) factor

### 8.1 Test Standard and Limit

#### 8.1.1 Test Standard

ETSI EN 300 328 V2.2.2 clause 4.3.1.5

#### 8.1.2 Limits

##### Transmitter limits for narrowband spurious emissions

| Test Item Limit           | Limit         |
|---------------------------|---------------|
| Medium Utilisation Factor | Less than 10% |

### 8.2 Test Setup

This requirement does not apply to adaptive equipment unless operating in non-adaptive mode.

In addition, this requirement does not apply for equipment with a maximum declared RF Output power level of less than 10 dBm e.i.r.p. for equipment when operating in a mode where the RF Output power is less than 10 dBm e.i.r.p.

The Equipment e.i.r.p. power is less than 10 dBm, So no requirement for this test item.

## 9 Adaptivity (Adaptive Frequency Hopping)

### 9.1 Test Standard and Limit

#### 9.1.1 Test Standard

ETSI EN 300 328 V2.2.2 clause 4.3.1.6

#### 9.1.2 Test Description

Adaptive Frequency Hopping equipment is allowed to operate in a non-adaptive mode providing it complies with the requirements applicable to non-adaptive frequency hopping equipment.

Adaptive Frequency Hopping equipment is allowed to have Short Control Signaling Transmissions (e.g. ACK/NACK signals, etc.) without sensing the frequency for the presence of other signals. Please see clause 4.3.1.6.3 Short Control Signaling Transmissions

Adaptive Frequency Hopping (AFH) equipment uses a Detect And Avoid (DAA) mechanism which allows an equipment to adapt to its environment by identifying frequencies, that are being used by other equipment.

Adaptive frequency Hopping systems shall implement either of the DAA mechanisms provided in clauses 4.3.1.6.1 Adaptive Frequency Hopping Using LBT based DAA or 4.3.1.6.2 Adaptive Frequency Hopping Using other forms of DAA (non-LBT based)

### 9.2 Test Setup

This requirement does not apply to non-adaptive equipment or adaptive equipment operating in a non-adaptive mode providing the equipment complies with the requirements and /or restrictions applicable to non-adaptive equipment.

In addition, this requirement does not apply for equipment with a maximum declared RF Output power level of less than 10 dBm e.i.r.p. for equipment when operating in a mode where the RF Output power is less than 10 dBm e.i.r.p.

Note:

The Equipment e.i.r.p. power is less than 10 dBm, so no requirement for this test item.

## 10 Transmitter Unwanted Emissions in the out-of-band domain

### 10.1 Test Standard and Limit

#### 10.1.1 Test Standard

ETSI EN 300 328 V2.2.2 clause 4.3.1.8

#### 10.1.2 Limits

The transmitter unwanted emissions in the out-of-band domain but outside the allocated band, shall not exceed the values provided by the mask in figure 1 of clause 4.3.1.8.2

Adaptive Frequency Hopping equipment is allowed to operate in a non-adaptive mode

### 10.2 Test Setup

### 10.3 Test Procedure

(1) The transmitter output was connected to the spectrum analyzer.

Set the spectrum analyzer as following:

Centre Frequency: 2484 MHz.

Span: 0 Hz

Resolution BW : 1 MHz

Filter mode: Channel filter

Video BW : 3 MHz

Detector Mode: RMS

Trace Mode : Clear / Write

Sweep Mode: Continuous

Sweep Points : 5000

Trigger Mode: Video trigger

Sweep Time: Suitable to capture one transmission burst

Step 2 (2483.5 MHz to 2483.5 MHz +BW):

- (1) Adjust trigger level to select the transmissions with the highest power level.
- (2) The highest power level shall be selected.
- (3) Set a window to match with the start and end of the burst and in which the RMS Power shall be measured using the Time Domain Power Function.
- (4) RMS Power within this 1 MHz segment (2483.5 MHz to 2484.5 MHz). Compare this value

the applicable limit provided by the mask.

- (5) Increase the centre frequency in steps of 1 MHz and repeat this measurement for every 1

MHz segment within the range 2483.5 MHz to 2483.5 MHz+BW. The centre frequency of the last 1 MHz segment within the range 2483.5 MHz to 2483.5 MHz +BW. The centre frequency of the last 1 MHz segment shall be set to 2483.5 MHz+BW-0.5 MHz (which means this may partly overlap with the previous 1 MHz segment).

Step 3 (2483.5 MHz +BW to 2483.5 MHz +2BW):

- (1) Change the centre frequency of the analyzer to 2484MHz + BW and perform the measurement for the first 1MHz segment within range 2483.5MHz +BW to 2483.5 MHz +2BW. Increase the centre frequency in 1MHz steps and repeat the measurements to cover this whole range. The centre frequency of the last 1 MHz segment shall be set to 2483.5 MHz+ 2BW-0.5 MHz.

Step 4 (2400 MHz-BW to 2400 MHz):

- (1) Change the centre frequency of the analyzer to 2399.5MHz and perform the measurement

for the first 1MHz segment within range 2400 MHz -BW to 2400 MHz Reduce the centre frequency in 1MHz steps and repeat the measurement to cover this whole range. The centre frequency of the last 1 MHz segment shall be set to 2400 MHz -BW+ 0.5 MHz.

Step 5 (2400 MHz-BW to 2400 MHz):

- (1) Change the centre frequency of the analyzer to 2399.5MHz-BW and perform the measurement for the first 1MHz segment within range 2400 MHz -2BW to 2400 MHz -CBW. Reduce the centre frequency in 1MHz steps and repeat the measurement to cover this whole range. The centre frequency of the last 1 MHz segment shall be set to 2400 MHz -2BW+ 0.5 MHz.

## 10.4 Test Equipment Used

## 11 TRANSMITTER UNWANTED SPURIOUS EMISSIONS IN THE SPURIOUS DOMAIN

### 11.1 Test Standard and Limit

#### 11.1.1 Test Standard

EN 300 328 V2.2.2 clause 4.3.2.8

#### 11.1.2 Limits

**Transmitter limits for spurious emissions**

| Frequency Range          | Maximum Power,<br>e.r.p.( $\leq 1$ GHz)<br>e.i.r.p.( $> 1$ GHz) | Bandwidth |
|--------------------------|---|-----------|
| 30 MHz to 47 MHz         | -36 dBm   | 100 kHz   |
| 47 MHz to 74 MHz         | -54 dBm   | 100 kHz   |
| 74 MHz to 87.5 MHz       | -36 dBm   | 100 kHz   |
| 87.5 MHz to 118 MHz      | -54 dBm   | 100 kHz   |
| 118 MHz to 174 MHz       | -36 dBm   | 100 kHz   |
| 174 MHz to 230 MHz       | -54 dBm   | 100 kHz   |
| 230 MHz to 470 MHz       | -36 dBm   | 100 kHz   |
| 470 MHz to 862 MHz       | -54 dBm   | 100 kHz   |
| 862 MHz to 1 GHz         | -36 dBm   | 100 kHz   |
| Above 1 GHz to 12.75 GHz | -30 dBm   | 1 MHz     |

### 11.2 Test Setup

(A) Radiated Emission Test Set-Up Frequency Bellow 1 GHz.

(B) Radiated Emission Test Set-Up Frequency Above 1 GHz.

### 11.3 Test Procedure

1. The EUT was placed on the top of the turntable in chamber.
2. The test shall be made in the transmitting mode. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
3. Set the spectrum analyzer as follows to measure the emissions (Below 1 GHz):
  - Resolution BW : 100 kHz.
  - Resolution BW : 300 kHz.
  - Detector : RMS.
  - Trace Mode : Max Hold.
  - Sweep time : 1s.
  - Span : 100M.
  - Amplitude : Adjust for middle of the instrument's range.
4. Set the spectrum analyzer as follows to measure the emissions (Above 1 GHz):
  - Resolution BW : 1 MHz.
  - Resolution BW : 3 MHz.
  - Detector : RMS.
  - Trace Mode : Max Hold.
  - Sweep time : 1s.
  - Span : 100M.
  - Amplitude : Adjust for middle of the instrument's range.
5. For 30~1000MHz spurious emissions antenna was placed 3 meters far away from the turntable. .
6. The broadband receiving antenna was fixed on each suspected emissions of both horizontal suspected value is indicated as Read Level (Raw).
7. Replace the EUT by standard antenna and feed the RF port by signal generator.
8. Adjust the frequency of the signal generator to the suspected emission and slightly rotate the turntable to locate the position with maximum reading.

9. Adjust the power level of the signal generator to reach the same reading with Read Level (Raw).
10. The level of the spurious emission is the power level of (g) plus the gain of the standard antenna in dBi and minus the loss of the cable used between the signal generator and the standard antenna.
11. If the measuring emissions that exceed the level of 6 dB below the applicable limit, the resolution bandwidth shall be switched to 30 kHz and the span shall be adjusted accordingly. If the level does not change by more than 2 dB, it is a narrowband emission; the observed value shall be recorded. If the level changes by more than 2 dB, the emission is a wideband emission and its level shall be measured and recorded.
12. The measurement shall be repeated at the lowest and the highest channel of the stated frequency range.

#### 11.4 Test Equipment Used

| Description            | Manufacturer   | Model No. | Serial No. | Last Cal.     | Cal. Interval |

## 12 Receiver Spurious Emissions

### 12.1 Test Standard and Limit

#### 12.1.1 Test Standard

ETSI EN 300 328 V2.2.2 clause 4.3.1.10

#### 12.1.2 Limits

**Spurious emission limits for receivers**

| Frequency Range    | Maximum Power,<br>e.r.p.( $\leq 1$ GHz)<br>e.i.r.p.( $> 1$ GHz) | Bandwidth |
|--------------------|---|-----------|
| 30 MHz to 1 GHz    | -57 dBm   | 100 kHz   |
| 1 GHz to 12.75 GHz | -47 dBm   | 1 MHz     |

### 12.2 Test Setup

(A) Radiated Emission Test Set-Up Frequency Bellow 1 GHz.

(B) Radiated Emission Test Set-Up Frequency Above 1 GHz.

### 12.3 Test Procedure

1. The EUT was placed on the top of the turntable in chamber.
2. The test shall be made in the transmitting mode. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
3. Set the spectrum analyzer as follows to measure the emissions:
  - Resolution BW : 100 kHz.
  - Resolution BW :300 kHz.
  - Detector : RMS.
  - Trace Mode : Max Hold.
  - Sweep time : 1s.
  - Span :100M.
  - Amplitude :Adjust for middle of the instrument's range.
4. Set the spectrum analyzer as follows to measure the emissions:
  - Resolution BW : 1 MHz.
  - Resolution BW :3 MHz.
  - Detector : RMS.
  - Trace Mode : Max Hold.
  - Sweep time : 1s.
  - Span :100M.
  - Amplitude :Adjust for middle of the instrument's range.
5. For 30~1000MHz spurious emissions measurement, the broad band bi-log receiving antenna was placed 3 meters far away from the turntable. .
6. The broadband receiving antenna was fixed on the same height with the EUT to find

each suspected emissions of both horizontal and vertical polarization. Each recorded suspected value is indicated as Read Level (Raw).

7. Replace the EUT by standard antenna and feed the RF port by signal generator.
8. Adjust the frequency of the signal generator to the suspected emission and slightly rotate the turntable to locate the position with maximum reading.
9. Adjust the power level of the signal generator to reach the same reading with Read Level (Raw).
10. The level of the spurious emission is the power level of (g) plus the gain of the standard antenna in dBi and minus the loss of the cable used between the signal generator and the standard antenna.
11. If the measuring emissions that exceed the level of 6 dB below the applicable limit, the resolution bandwidth shall be switched to 30 kHz and the span shall be adjusted accordingly. If the level does not change by more than 2 dB, it is a narrowband emission; the observed value shall be recorded. If the level changes by more than 2 dB, the emission is a wideband emission and its level shall be measured and recorded.
12. The measurement shall be repeated at the lowest and the highest channel of the stated frequency range.

#### 12.4 Test Equipment Used

## 13 Receiver Blocking

### 13.1 Test Standard and Limit

#### 13.1.1 Test Standard

ETSI EN 300 328 V2.2.2 clause 4.3.1.11

#### 13.1.2 Test Description

Receiver blocking is a measure of the capability of the adaptivity mechanism to operate as intended (see clause 4.3.1.6) in the presence of an unwanted signal (blocking signal) on frequencies other than those of the operating channel and the adjacent channels.

Adaptive Frequency Hopping equipment is allowed to have Short Control Signaling Transmissions (e.g. ACK/NACK signals, etc.) without sensing the frequency for the presence of other signals. Please see clause 4.3.1.6.3 Short Control Signaling Transmissions

#### 13.1.3 Test Limits

Adaptive Frequency Hopping equipment shall comply with the requirements defined in clauses 4.3.1.6.1 (LBT based DAA) or 4.3.1.6.2 (non-LBT based AA) in the presence of a blocking signal with characteristics as provided in bellow:

d)

### 13.2 Test Setup

This requirement does not apply to non-adaptive equipment or adaptive equipment operating in a non-adaptive mode providing the equipment complies with the requirements and /or restrictions applicable to non-adaptive equipment.

In addition, this requirement does not apply for equipment with a maximum declared RF Output power level of less than 10 dBm e.i.r.p.for equipment when operating in a mode where the RF Output power is less than 10 dBm e.i.r.p.

Note:

The Equipment e.i.r.p. power is less than 10 dBm, so no requirement for this test item.
